

Fulltime

Embedded Software Developer

Unsolicited Application

robodev offers a completely new kind of automation technology with its intelligent modular system.

If you think you are right for us, please apply via this unsolicited application. The focus would be in on real-time Linux, RTOS, Ethernet fieldbus systems and ROS. C, C++ and Python are the dominant programming languages.

You have ...

- knowledge of C, C++ and scripting languages;
- practical experience with Linux and microcontrollers;
- already developed software in teams;
- programmed (open source) software for personal interests.

We offer you ...

- a work environment build on high-tech and fun;
- the opportunity to contribute in creating a unique product;
- diversity of tasks and technologies;
- a team with clear cut goals and a firm motivation;
- personal growth in a startup atmosphere.

You are ...

- happy at work when having open and friendly colleagues;
- someone who asks for guidance, but then find your own path;
- eager to learn something new every day;
- in favor of substantiated and pragmatic decision making.

We are ...

robodev! An interdisciplinary and outstanding robotics startup from the KIT.
