

Student employee / Intern

## Mechatronics Development

Unsolicited Application

robodev offers a completely new kind of automation technology with its intelligent modular system. If you are an engineering student and think you are right for us, please apply via this unsolicited application.

### You have ...

- knowledge working with 3D-CAD/CAM systems;
- practical experience with electronic circuits;
- basic skills in automation technology and robotics;
- worked on mechatronics projects for personal interests.

### We offer you ...

- a work environment build on high-tech and fun;
- the opportunity to contribute in creating a unique product;
- diversity of tasks and technologies;
- a team with clear cut goals and a firm motivation;
- personal growth in a startup atmosphere.

### You are ...

- happy at work when having open and friendly colleagues;
- someone who asks for guidance, but then find your own path;
- eager to learn something new every day;
- in favor of substantiated and pragmatic decision making.

### We are ...

robodev! An interdisciplinary and outstanding robotics startup from the KIT.
